Luxury Vinyl Tile/Plank

Cleaning and Maintenance Guide

Part of **SIG** plc

## MANUAL

1. Sweep up dust & dirt, removing large debris

2. Apply alkaline cleaning fluid to the floor in the correct dilution (rate depends on cleaner used and level of soiling)

3. Mop wash or spray clean with soft pads.

4. Rinse with water then remove dirty water with a mop and allow to dry - use a two compartment bucket to avoid mixing clean and dirty water

## MECHANICAL

1. Vacuum up dust and dirt, removing large debris

2. Apply alkaline cleaning fluid to the floor in the correct dilution (rate depends on cleaner used and level of soiling)

3. Mop wash or spray clean with soft pads

4. Wet vacuum residual wetness, rinse with clean water and vacuum dry

## HINTS AND TIPS

1. Give consideration to tailoring a cleaning regime to the levels and types of traffic to which the area will be exposed to. Those areas subject to heavy trafficking will need to be cleaned more often than areas which are subject to less traffic.
2. Use cleaning fluids and agents as shown within this guide or demonstrably equivalent versions. Adhere to stated levels of dilution and the manufacturer's instructions. **Do not mix** cleaning fluids. Always check the suitability of cleaners for use on vinyl floors. **Do not use** fluids or agents containing pine oil.
3. Protect newly installed floors from other construction trades. Cover and protect newly laid isafe floor finishes during construction periods with a suitable non-staining protective covering.
4. Some materials are known to stain vinyl floors, including (but not limited to): asphalt, bitumen, wet cardboard, dyes from literature or packaging print, wet hardboard, rubber backed mats, furniture rests and wheels, some shoes without anti-staining soles, heat degradations, some chemicals used in cleaning products including pine oil, posters and powder paints and certain hair dyes.
